How to Integrate Webhook in WordPress with Paymattic?

Integrations · https://paymattic.com/docs/how-to-integrate-webhook-in-wordpress-with-paymattic/

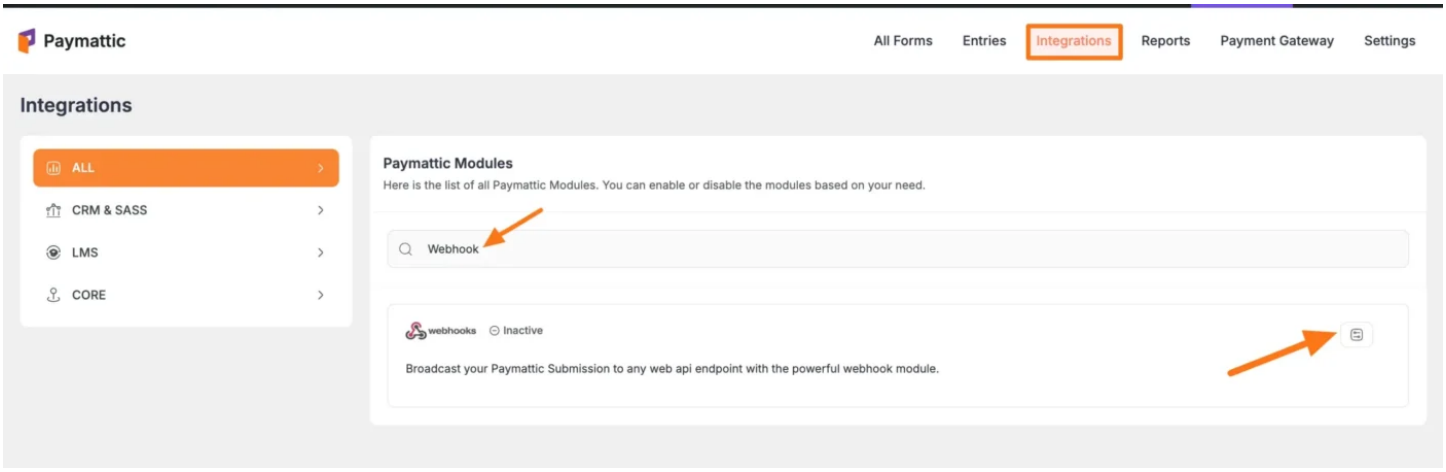

Paymattic has another exciting feature, which is **Webhook Integration** to increase the performance of your payment form. This article will guide you through integrating **Webhook** in your **WordPress Site** with **Paymattic**.

Enable Fluent Webhook Integration

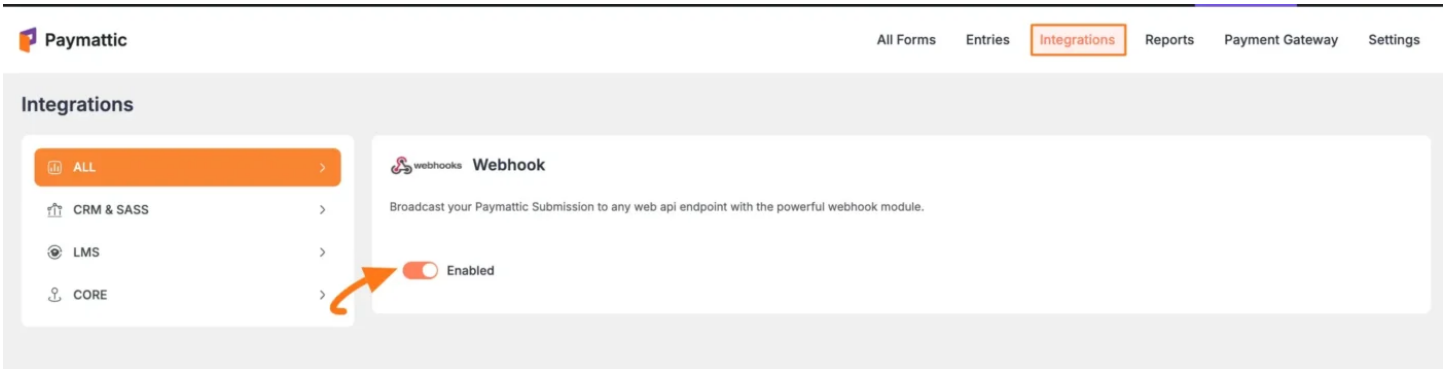

To learn how to enable Webhook integration, follow the steps with screenshots below –

First, go to **Integrations** from the **Paymattic Navbar**, search for **Webhook** through the search bar, and you will get the **Webhook** integration module.

Here, you will see the Webhook's **Settings Icon** on the right side, click on it.

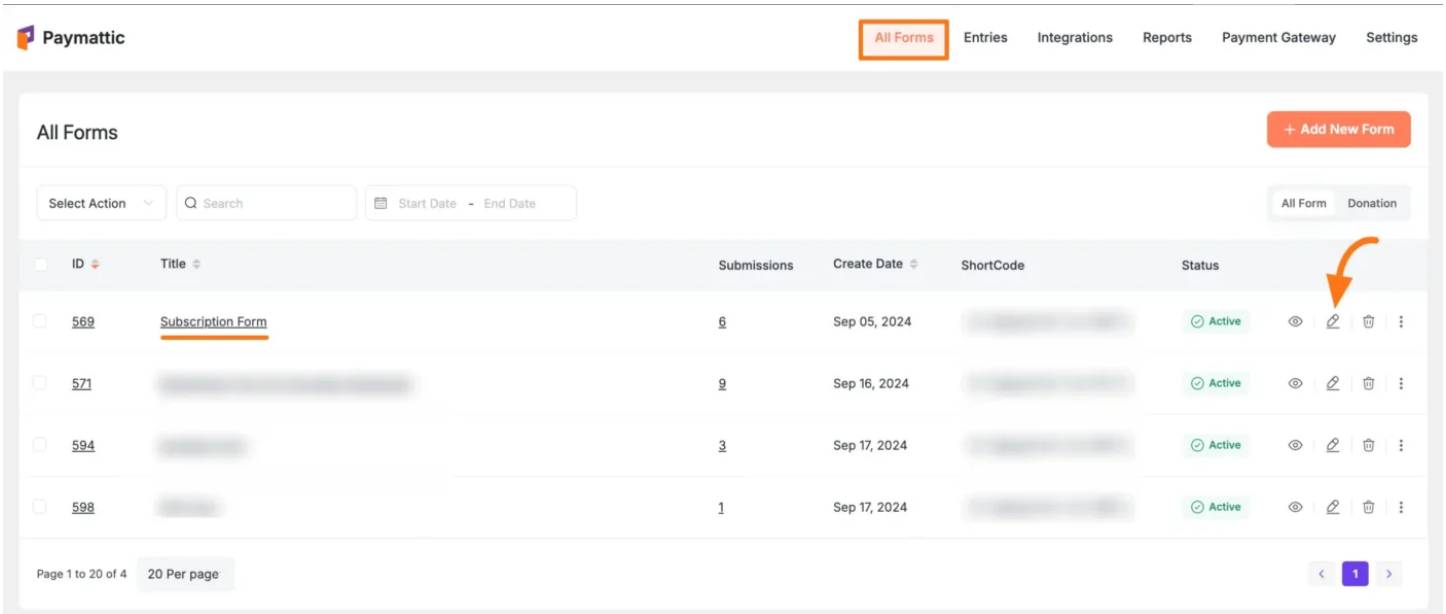

Click the **Toggle** button and your Webhook integration module will be enabled.

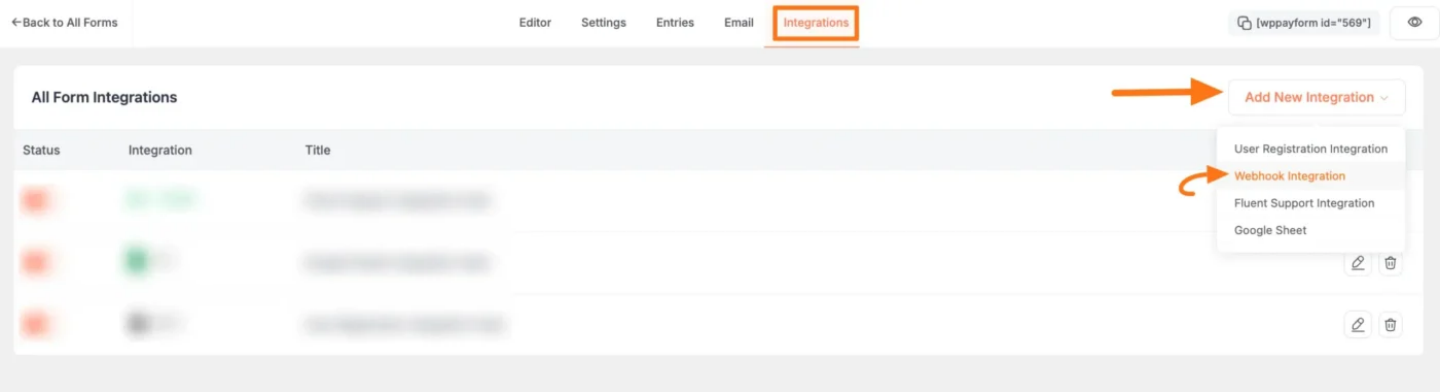

Integrate Webhook in a Form

To learn how to integrate Webhook into any specific Form in Paymattic, follow the steps with the screenshots below –

First, go to **All Forms** from the **Paymattic Navbar**, **select** the **Desired Form** where you want to integrate the **Webhook** and click the **Pencil/Editor Icon.**

Once the **Editor** page opens, go to the **Integrations** tab, click the **Add New Integration** button & select **Webhook Integration** feed from the dropdown list.

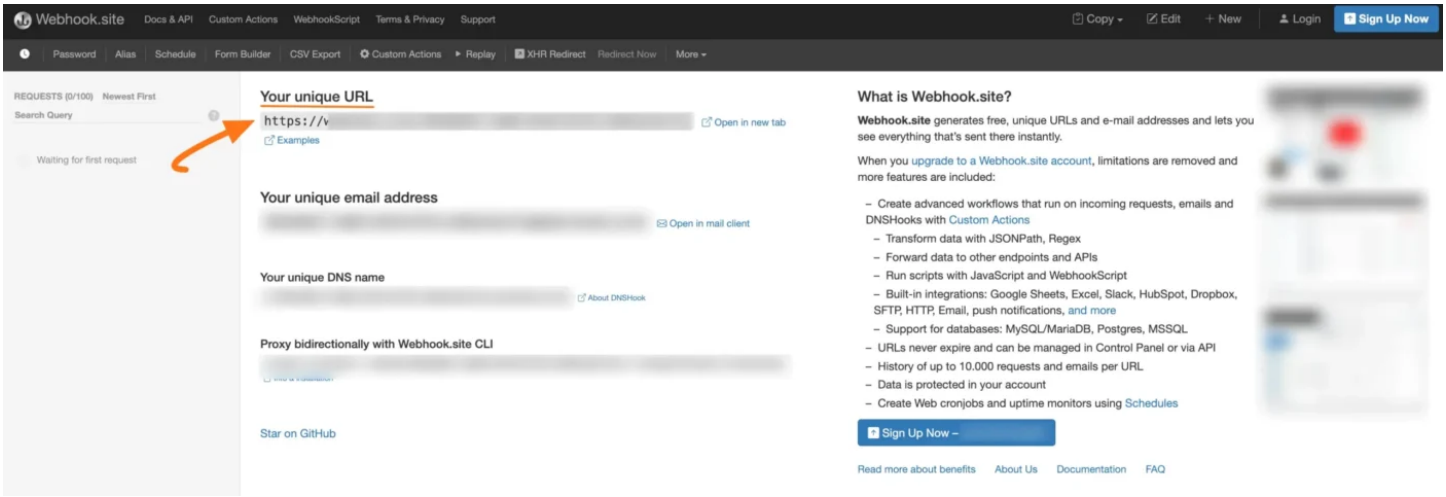

Now, a pop-up page will appear with various settings options for configuring the Webhook.

All the settings options mentioned in the screenshot below are briefly explained:

- **Feed Name**: Here, you can set a name according to your preference for your feed. This field is required to be filled in.
- **Webhoo URL**: This is also a required field. Here, provide the URL where you want to send the Paymattic submission data. More specifically, enter the URL that is provided by the Webhook recipient. To learn how to get the Webhook URL from the Webhook Site, follow the steps below –

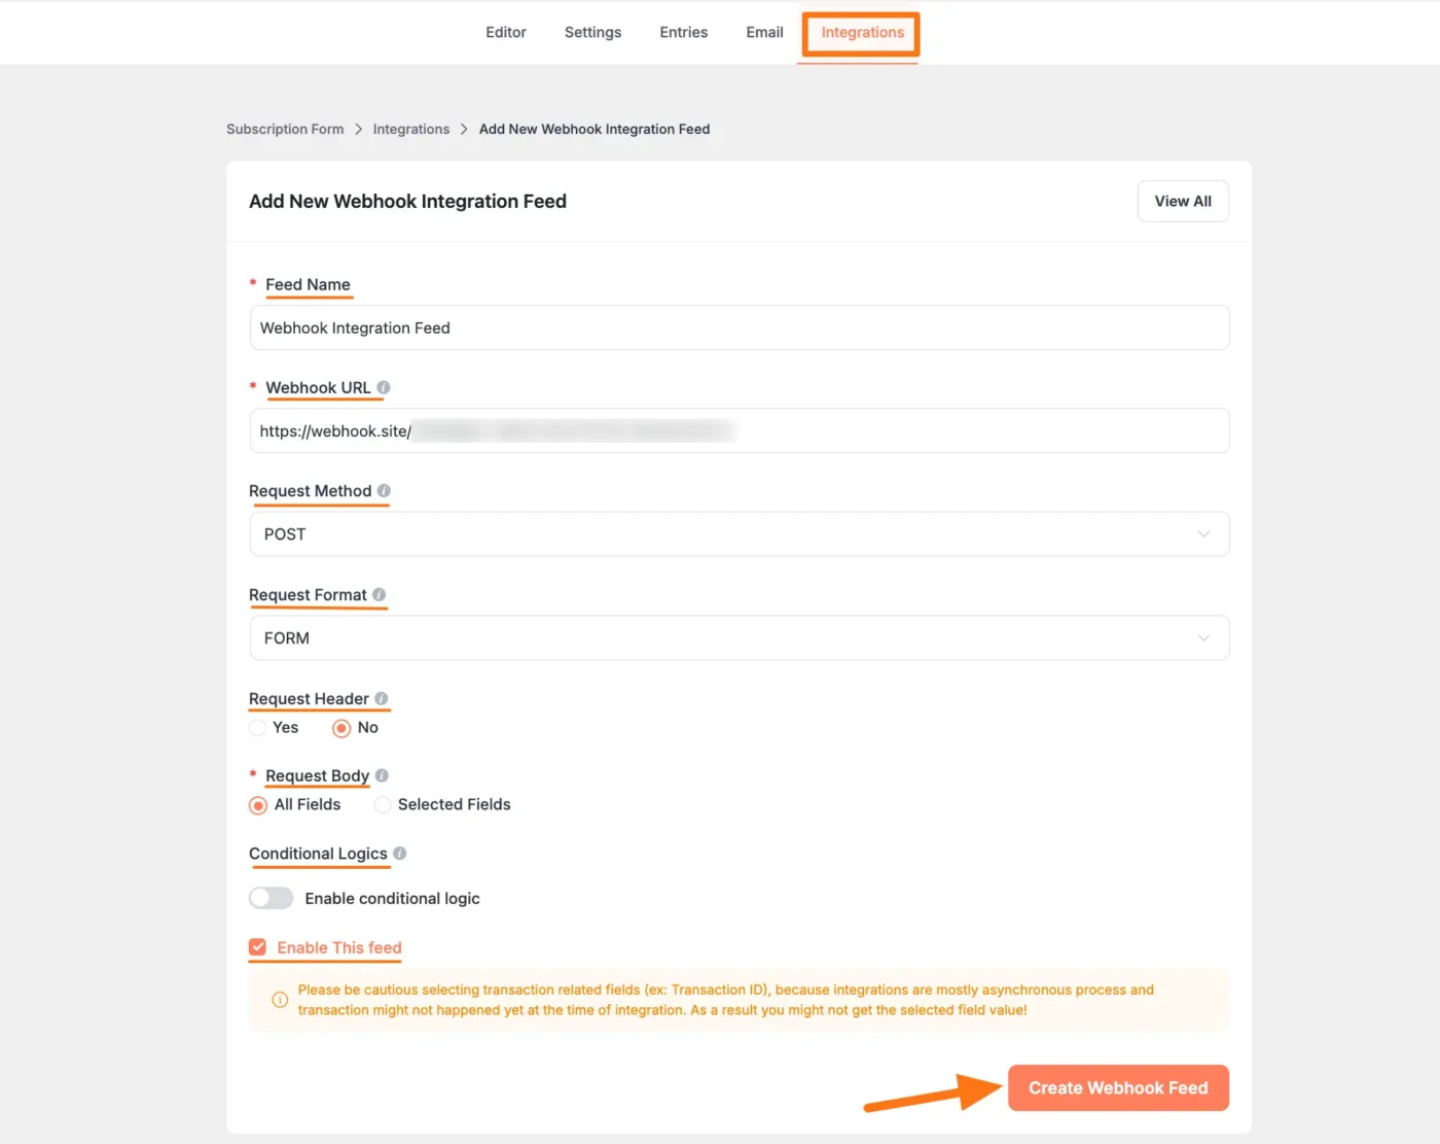

Get the Webhook URL

First. go to this Webhook.site and you will get your desired **URL** from the **Your Unique URL** field. Copy this **URL** to paste it into the **Webhook URL** field.

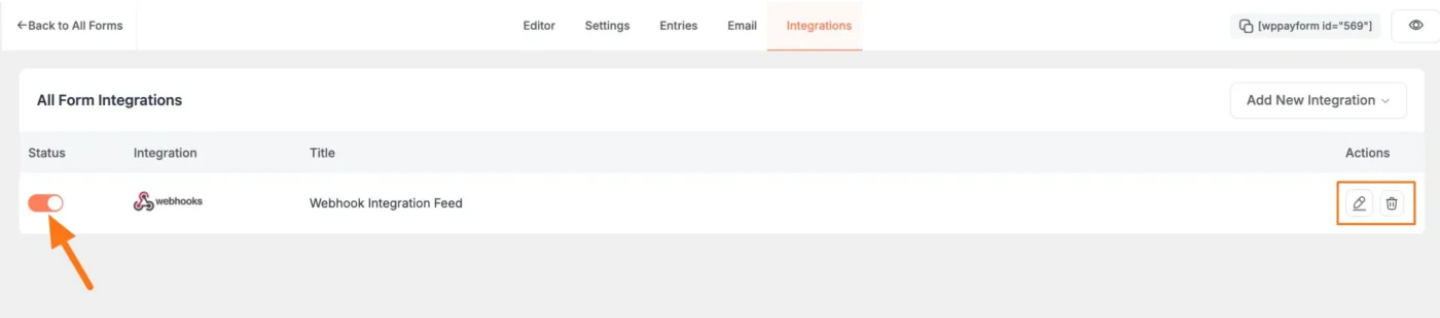

- **Request Method**: Here you need to select the HTTP method used for the Webhook request. Choose one method among the GET, POST, PUT, PATCH, and DELETE.
- **Request Format**: Select the data format for the Webhook request. You have to choose one format between JSON and FORM.
- **Request Header**: Choose whether you want to send any headers with the Webhook request.
- **Request Body**: Select body if you want to send any specific body text with the webhook request, otherwise all fields will be sent.
- **Conditional Logics**: This option allows Webhook integration to function conditionally based on your submission values according to your set conditional logic/s. To learn more, read this Documentation.
- **Enable This Feed**: Check this option, to ensure this integration feed remains enabled, and all the actions of this feed function properly.

Once the setup is done, finally, click the **Create Webhook Feed** button.
And, your Webhook will be integrated into this specific form!

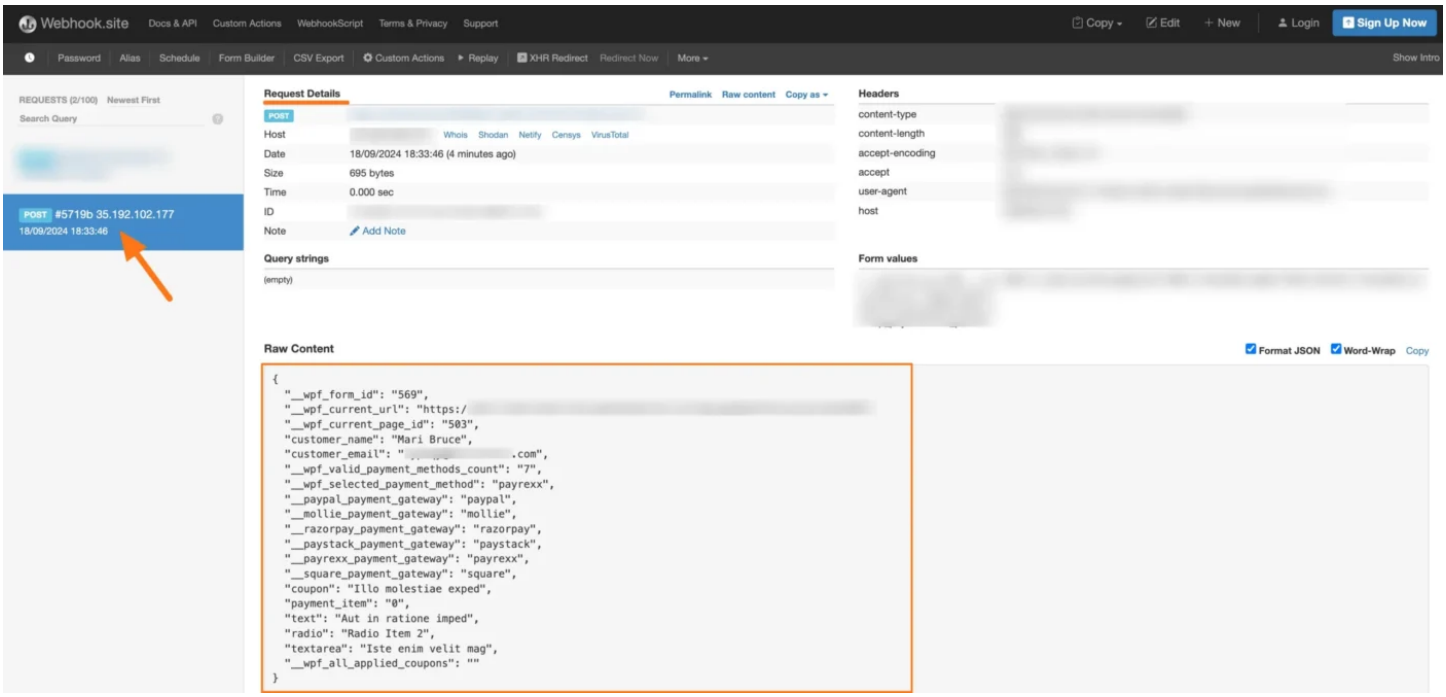

After successful Integration, now you will see that your **Zapier Integration Feed** has been added here.

You can disable or enable this feed anytime by clicking the **Toggl**e button if needed.
Also, you can modify your feed anytime by clicking the **Pencil Icon** and delete it by clicking the **Trash Icon**.

Preview of Integrated Webhook

Here, you can see the preview of the opened tickets of Webhook through the Form entries that I set up during the integration.

This way you can easily integrate Webhook with Paymattic!
